Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, "a sensor" must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 3654

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5, 8-9, and 12-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Byrt, U.S. Patent No. 3752412.

With respect to claims 1, 8-9 and 12-14, Byrt '412 shows applicants' claimed invention, specifically teaching an apparatus comprising:

A supplied web for a constant feeding of a web material (W); at least two winding cores (5, i.e. shaft), said at least two winding cores are positioned approximately parallel to one another and independently rotate in the same direction in a stationary structure, as shown in Fig. 1; and a lay-on arm assembly (7, 8), said web material (W) passes through said lay-on arm assembly and is wound on one of said winding cores to a predetermined quantity, said lay-on arm assembly cuts (12) said web material upon obtaining said predetermined quantity of said web material on said winding cores; and transfers cuts constant feed of said web material to another of said winding cores, as shown in Fig. 1.

With respect to claims 2-4, Byrt '412 shows a positioning apparatus (part of 7) and a control means (i.e. limit switch 18) for said lay-on arm assembly, said positioning apparatus and said control means maintain a constant pressure of a lay-on roll (9), of said lay-on arm assembly against a roll of said web material as said web material is wound onto said winding shaft, as shown in Fig. 1 and described on column 3, lines 26-47.

Art Unit: 3654

With respect to claim 5, Byrt '412 shows a pivot means (2) for each winding cores (5) to swing from a winding position to a removing station, see figure 1.

With respect to claims 12-14, the method described in these claims would inherently result from the use of invention of Byrt '412 as advanced above.

Allowable Subject Matter

Claims 6-7 and 10-11 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
